County of Los Angeles, Department of Coroner Investigator's Narrative

Case Number: 2012-01022

Decedent: HOUSTON, WHITNEY ELISEBETH

spoon with a white crystal like substance in it, a rolled up piece of white paper from off the top of a counter along the east wall in the bathroom. I also collected remnants of a white powdery substance from out of a drawer and from the bottom of a mirror in the same drawer in the bathroom counter along the east wall of the bathroom. I later booked all of the bottles of prescription medications, the bottle of the supplement, all of the blister packs, all of the loose tablets and capsules, the spoon, and the white powdery substance at the Forensic Services Center as evidence.

➔ On Saturday 02/11/2012 at 2342 hours, Criminalist Mark Schuchardt used a pubic hair kit on the decedent at the scene. On Saturday 02/11/2012 at 2355 hours, Criminalist Mark Schuchardt collected fingernail clippings from the decedent's hands at the scene. On Sunday 02/12/2012 at 0004 hours, Criminalist Mark Schuchardt collected hair standards from the decedent at the scene. On Sunday 02/12/2012 at 0015 hours, Criminalist Mark Schuchardt used a sexual assault kit on the decedent at the scene. Criminalist Mark Schuchardt later booked the pubic hair kit, the fingernail clippings, the hair standards, and the sexual assault kit at the Forensic Services Center as evidence.

Body Examination:

The decedent is a 48 year-old black female with short black hair, brown eyes, and she has all of her natural teeth. There is an old healed vertical scar approximately 2" in length on her inner lower left forearm. No other scars and no tattoos were noted. The decedent was nude, lying supine on the living room floor. The top of her head was facing south. Her right arm was bent at the elbow with her right hand resting on the floor, against the right central portion of her torso. Her left arm was slightly bent at the elbow with her left hand resting on the floor against her outer upper left thigh. Both of her legs were straight with her right foot pointing north and her left foot was pointing northwest. There was a defibrillator patch on the upper right side of her chest and there was another defibrillator patch on the left central portion of her torso. Both of her eyes were congested and there was a bloody purge coming from her nose. There were 2 superficial abrasions to the left side of her forehead and there was a superficial abrasion to the left side of the bridge of her nose. There was a superficial abrasion to the top of her right shoulder. There was minor skin slippage to the upper central portion of her chest, to the inner left central portion of her chest, and to the lower central portion of her chest. There was minor skin slippage to the upper left side of her abdomen. There was a superficial abrasion to her outer lower left arm. There was a possible old puncture wound to her inner left elbow. There was a superficial abrasion to her inner central left forearm and there were minor abrasions to the top of her left hand, between the middle and ring fingers. There was minor skin slippage to the front of both of her knees and to both of the front central portion of her legs. There was minor skin slippage to her inner upper right calf and to her outer lower left leg. There was skin slippage to the lower central portion of her back. On Sunday 02/12/2012 at 0005 hours, the water temperature in the bathtub was 89.0 degrees. On Sunday 02/12/2012 at 0025 hours, the air temperature inside the living room was 67.0 degrees. On Sunday 02/12/2012 at 0031 hours, the decedent's liver temperature was 96.0 degrees.

Identification:

On Sunday 02/12/2012 at 0030 hours, I positively identified the decedent as Whitney Elisebeth Houston with a DOB of 08/09/1963 by the photograph on her California driver's license at the scene.

Next of Kin Notification:

On Saturday 02/11/2012 at an unknown time, friends notified _____, the decedent's daughter, of her mother's death. I have not spoken with _____ at the time of completion of this report. Please see case notes for further information.

'There is a particular propensity for apnea [slow breathing] when even very small doses of midazolam are given in conjunction with fentanyl,' write emergency medicine experts Reichman and Simon.. < Talk:Amy Winehouse

Amy Winehouse Death Photo DeadAmy Winehouse Autopsy ResultsAmy Winehouse Autopsy PhotoAmy Winehouse Cause Of DeathAmy Winehouse Crime SceneSummary of Autopsy Report for Diana, Princess of WalesOn August 30, 2007, CBS Evening News obtained a copy of Spencers 40-page autopsy report and ran a television piece titled, 'Was there time to save Diana? New revelations on the 10th anniversary of Princess death raise questions'.. The SAMU team spent about 30 more minutes (around 12:50 am [after the cardiac arrest] to 1:19 am) tending to Diana in the tunnel.

Stanley Zydlo, MD, a prominent American emergency physician from Northern Illinois and pioneer in pre-hospital trauma systems dating to their origin in the late 1960s and early 1970s, said in an interview with a CBS reporter that at least 70 minutes were lost in the field during Diana, Princess of Wales prehospital care.. This effect is more likely to occur in hypovolemic [low blood volume inside the circulatory system from, say, internal hemorrhage or dehydration] patients or elderly patients', Reichman and Simon note with caution.. The medical dispatcher called the hospital to assess for ICU bed availability, which was normal procedure.. The French SAMU physician said in a deposition that Diana, Princess of Wales was crying out.

There apparently was no appreciation for the seriousness of her internal blunt injuries.. The first witnesses on the scene found her sitting on the floor of the back seat with eyes open and mumbling indistinct phrases.. At 1:19 am, the SAMU team contacted the SAMU de Paris medical dispatcher to request permission to take her to a hospital four miles away.. Personnel with Sapeurs-Pompiers, a military firefighting service run by the civil defense component of the French Ministry of the Interior, apparently arrived within seven minutes of the crash (12:32 am) and began administering treatment. When he could not reassure her, he started an intravenous drip in her arm and at 12:45 am infused intravenous midazolam (Versed) and fentanyl, an opioid analgesic 80 times more potent than morphine, to 'calm her down'.. He performed endotracheal intubation [inserted a tube into her windpipe to open and maintain her airway], placed her on a respirator [to ventilate her lungs with oxygen through the tube in her windpipe], and performed external cardiac massage to reestablish her cardiac rhythm.. In Diana's case, the bleeding was from a torn pulmonary vein in her chest Diana was a 36-year-old unrestrained (no seatbelt) female back-seat Mercedes automobile occupant in a motor vehicle accident who sustained blunt chest and probably head trauma at 12:25 am on August 31, 1997.. After administering the drugs and beginning to extract the patient from the car, the SAMU physician noted that Diana went into cardiac arrest [her heart stopped beating].. When a patient has unstable vital signs (blood pressure, pulse, respirations) following multiple trauma, rapid transport to a surgeon in a hospital is imperative to find and stop the source of haemorrhage, he said.. The first physician on the scene, a physician with the private medical service SOS Medecins, called the SAMU de Paris switchboard operator, which is the normal routine.. Fifteen minutes after the motor vehicle crash (12:40 am), the first SAMU medical intensive care unit (MICU) arrived with its on board physician, probably an anesthesiologist but possibly an anesthesiologist-designated/trained general practitioner. cea114251b [Logmein Rescue Mac Download](#)
